QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to is. As a result, these questions will not appear in the review screen.

A company is implementing Dynamics 365 Finance. The company uses Microsoft 365 apps.

The company wants to integrate Microsoft Word and Excel into Dynamics 365 Finance.

You need to identify the underlying technology that is required.

Solution: Azure DevOps

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

Instead the correct Solution: Azure Active Directory (Azure AD)

Note:

Office integration overview

Applies to these Dynamics 365 apps:

Commerce, Finance, Supply Chain Management

This article reviews Microsoft Office integration concepts and features. The integration depends on several technologies:

Working in Microsoft Azure

*-> Working with Azure Active Directory (Azure AD)

Running a web client in multiple browsers

The Microsoft Office integration capabilities provide users with a productive environment that helps them get the job done by using Office products.

QUESTION 2

You need to recommend a purchasing process based on the requirements.

Which three system capabilities should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. signing limits

B. purchasing policies

C. workflow

D. procurement categories

E. security roles

Correct Answer: CDE

Reference: https://docs.microsoft.com/en-us/dynamics365/supply-chain/procurement/purchase-policies

---

QUESTION 3

DRAG DROP

A company is implementing Dynamics 365 Supply Chain Management. The company has 11 legal entities. Each entity uses a separate enterprise resource planning (ERP) system. A customer may have a unique customer number in each

system because the systems are disconnected. One of the customer numbers will be used as the master number in Dynamics 365.

The company plans to add entities to Supply Chain Management over time. Customer records will continue to be added to the ERP systems throughout the implementation lifecycle and must be kept up to date. The ERP systems will be

decommissioned after go-live.

You need to create a strategy to migrate the customer data and ensure that new records are automatically mapped.

Which solution should you implement for each requirement? To answer, drag the appropriate solutions to the correct requirements. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between

panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Solutions	Requirement	Solution
Existing ERP system	Consolidate on the single master customer number.	
Azure Data Lake	Store historical data.	
Data Migration Framework	Import customer data.	
F&O Data Feeds		

Correct Answer:

Solutions	Requirement	Solution
Existing ERP system	Consolidate on the single master customer number.	Data Migration Framework
Azure Data Lake	Store historical data.	Azure Data Lake
Data Migration Framework	Import customer data.	Data Migration Framework
F&O Data Feeds		

Reference: https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/data-entities/azure-data-lake-overview

---

QUESTION 4

A company is implementing Dynamics 365 Finance.

The company wants to automate expense reports processing. The new process must provide visibility into all steps of the approval process.

You need to recommend a solution.

Which two solutions should you recommend? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. Use Microsoft Power Automate to create a workflow.

B. Use the Business process modeler (BPM) to create a business process flow.

C. Use the PowerApps platform to create a business process flow.

D. Create a workflow that runs on Application Object Server (AOS).

Correct Answer: AD

QUESTION 5

You need to define Margie\\'s Travel legal entity and tenant structure in the solution blueprint. What should you define?

A. Three tenants with each tenant containing one legal entity.

B. One tenant with each country configured as a separate legal entity.

C. Three tenants with each country configured as a separate legal entity.

D. One tenant for US and UK as separate legal entities. One tenant for Jamaica with one legal entity.

Correct Answer: D

Margie\\'s created a second company based in Jamaica, followed by the acquisition of a third company in the United Kingdom (UK).

All three countries must use Dynamics 365 Finance.

Margie\\'s Travel wants to enable customer self-service in the future for customers based in the US and UK.

QUESTION 6

A company uses Dynamics 365 Supply Chain Management and has two legal entities that distribute the same items. One of the legal entities uses advanced warehouse management.

New items that are created must meet the business needs of both companies and allow for consolidated analytics.

You need to recommend a master data management strategy to standardize the item master and meet the business requirements.

What should you recommend?

A. Create the product record and release to each company where setup variations are completed.

B. Use Common Data Management to create the item templates for both legal entities.

C. Create an item in each company with different item numbers.

D. Use an advanced warehouse setup for the product and release to both companies.

E. Create an item in each company with the same item number.

Correct Answer: B

QUESTION 7

An organization is implementing Dynamics 365 Supply Chain Management.

You need to create a plan to define performance test scenarios.

Which three actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Define the performance testing scenarios.

B. Define whether users of the system will be adequately trained.

C. Determine the size of the production environment in the cloud.

D. Define the expected normal and peak volumes for the functional areas in-scope.

E. Define measured goals and constraints for response time and throughput for each scenario.

Correct Answer: ADE

Reference: https://medius.studios.ms/video/asset/PPT/MBAS19-THR2066

QUESTION 8

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is implementing Dynamics 365 Finance and Operations applications.

The company has the following security requirements:

1.

 Employees working from home must use company-managed devices only to access the applications.

2.

 Users with administrative roles must use multi-factor authentication (MFA).

You need to implement a security solution.

Solution: Create conditional access policies.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

Plan a Conditional Access deployment Microsoft Entra Conditional Access analyses signals such as user, device, and location to automate decisions and enforce organizational access policies for resources. Conditional Access policies

allow you to build conditions that manage security controls that can block access, require multifactor authentication, or restrict the user\\'s session when needed and stay out of the user\\'s way when not.

QUESTION 9

A company is upgrading their AX 2012 R3 environment to Dynamics 365 Finance. The company plans to upgrade the data store by using a phased approach.

You need to define the strategy to migrate master data and opening balances.

Which tool should you recommend?

A. Data migration tool

B. Upgrade analysis

C. Usage profiler

D. Data Import/Export Framework

Correct Answer: D

*

 Data Import/Export Framework (DIXF)

Data Management Framework (DMF) is in Dynamics 365, DIXF in AX 2012. A possible solution is to use DIXF to export data from AX 2012 followed by import using DMF in Dynamics 365.

*

 Data upgrade tool

This Microsoft Dynamics AX 2012 data upgrade process is for self-service environments. Complete the sections of this topic in the following order:

1.

 Prerequisites

2.

 Data upgrade process ?Run the AX2012DataUpgradeToolKit.exe application to complete the upgrade process.

3.

 Reporting section of the application ?Review the reports of the replication validation, replication status, data upgrade status, and rollback data upgrade status.

4.

 Tooling section of the application.

For this question:

Correct answers include:

*

 Data upgrade tool

*

 Data Import/Export Framework Incorrect answers include:

*

 Business process modeler

*

 Combine XPO tool

*

 Data migration tool

*

 Microsoft Dynamics AX Intelligent Data Management Framework

*

 Upgrade analysis

*

 Usage profiler Incorrect:

*

 Business process modeler BPM is not related to migration.

Business process modeler (BPM) in Microsoft Dynamics Lifecycle Services (LCS) is a tool that you can use to create, view, and modify repeatable implementations that are based on business process libraries. BPM helps you align your business processes with industry-standard processes that are described by the American Productivity and Quality Center (APQC). You can perform fit-gap analysis between your business requirements and the default processes in finance and operations apps. Additionally, you can add new business processes that aren\\'t already defined.

*

 Data migration tool DMT applies to AX2009 only.

*

 Upgrade analysis Run the upgrade analyzer tool against your AX 2012 environment. This tool will assist you in identifying data that can be cleaned up without losing any functionality. It also reviews your existing SQL configuration and recommends optimization for performance improvement. Deprecated features that you are currently using in AX will be highlighted to help you discover gaps in functionality and alternatives will be offered.

*

Microsoft Dynamics AX Intelligent Data Management Framework Data Management Framework (DMF) is in Dynamics 365.

QUESTION 10

You need to recommend a strategy to resolve the issue with the performance benchmarks. What should you recommend?

A. sprint plan

B. project plan

C. RACI plan

D. FastTrack workshop

E. Scrum board

Correct Answer: E

Agile teams, commonly known as Scrum teams, consist of the Product Owner, Scrum Master, and developers and work as a cross-functional team.

What Is a Scrum Board?

The scrum board is an agile project management tool that enables teams that aim to work iteratively, to visualize, track, and manage work during a sprint, or fixed period of time. Its structure encourages clear communication, transparent

workflows, and optimized task management.

The scrum board represents agile principles visually. Each card on the board is a work item that the team has prioritized for that sprint. Together, columns on the board constitute the team\\'s workflow. As the team work moves forward, the

cards on the board move as well. All other work items that were not prioritized for this sprint are found in the scrum backlog.

Key Components of a Scrum Board

*

 Scrum Artifacts

*

 Scrum Team

Scrum teams should be small and cross-functional. They should combine close collaboration with the ability to complete substantial work within a given sprint. They typically consist of the following key members, each with their own role,

purpose, and responsibilities that contribute to success.

-> Product Owner: The product owner represents the stakeholders\\' interests. Within a software development team, they ensure that the development team is working on the most relevant tasks that will improve the product. They are

responsible for defining user stories, prioritizing the product backlog, ensuring a clear understanding of requirements,

and deciding on the product\\\'s direction.

-

 Scrum Master: The scrum master serves as a coach for the team.

-

 Scrum Development Team: The scrum development team is responsible for transforming product backlog items into potentially shippable increments during each sprint.

Scenario:

Development:

The development team must create a performance strategy that involves the functional implementation team and the different development teams by using Microsoft recommendations.

Development, Issues:

The development and functional teams are not taking ownership of the performance benchmark testing. There are no functional designs, benchmark scenarios, or expectations setting created to date.

Implementation

The implementation of new solutions and features follows an Agile implementation strategy.

QUESTION 11

HOTSPOT

A company is implementing Dynamics 365 Finance and Dynamics 365 Supply Chain Management.

The company requires a new web solution for customer sales. The solution must include catch weight items and functionality to receive Advance Shipping Notices (ASNs) from its vendors.

You need to identify the solution for each requirement by using standard functionality where it exists.

Which solution should you choose for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement	Solution
Web sales	▼
	Dynamics 365 Commerce
	Power Automate
	Dynamics 365 Supply Chain Management
Advance shipping notice	▼
	Dynamics 365 Commerce
	AppSource ISV solution
	Dynamics 365 Supply Chain Management

Correct Answer:

Answer Area

Requirement	Solution
Web sales	▼
	Dynamics 365 Commerce
	Power Automate
	Dynamics 365 Supply Chain Management
Advance shipping notice	▼
	Dynamics 365 Commerce
	AppSource ISV solution
	Dynamics 365 Supply Chain Management

Box 1: Dynamics 365 Commerce

Dynamics 365 Commerce — built on the proven Dynamics 365 Retail capabilities — delivers a comprehensive omnichannel solution that unifies back-office, in-store, call center, and digital experiences.

This release enables the creation of digital experiences using built-in web authoring and development tools to produce engaging and intelligent digital storefronts. A connected marketing and headless commerce platform further enable the

seamless management of content, assets, promotions, inventory, and pricing across all channels.

*

Everything to build and run digital commerce: Streamline your business and end-to-end commerce solution that scales to your needs across traditional and emerging channels. Built-in web authoring and development tools enable you to create engaging intelligent digital storefronts, while a connected marketing and headless commerce platform enables seamless management of content, assets, promotions, inventory, and pricing across channels.

*

Etc.

Box 2: Microsoft Dynamics 365 Supply Chain Management

Microsoft Dynamics 365 Supply Chain Management provides two different modules for working with transportation, Transportation management (TMS) and Landed cost.

Both TMS and Landed cost provide functionality for managing the receipt of goods in a container. TMS uses the concept of loads to manage the goods, purchase orders, and transfer orders that are associated with a shipment container. TMS supports receiving on the basis of a packaging structure that is received through an advance shipping notice (ASN). Landed cost uses the concept of shipping containers to process purchase orders and control overhead costs that are associated with a container on a vessel.

QUESTION 12

DRAG DROP

An organization uses Dynamics 365 Finance and Dynamics 365 Supply Chain Management.

The organization is experiencing various performance issues and is looking for solutions.

You need to recommend tools to determine the cause of the performance issues.

What should you recommend? To answer, drag the appropriate tools to the correct requirements. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Tools

Performance timer/Fidler/Browser debugger

LCS environment monitoring

Trace parser

PerfSDK/Visual Studio load test

Answer Area

Requirement	Tool
Network issues	Tool
View performance logs and telemetry data	Tool
Performance optimize a slow process using X++ and SQL	Tool
Simulate concurrent users	Tool

Correct Answer:

Tools

Answer Area

Requirement	Tool
Network issues	Performance timer/Fidler/Browser debugger
View performance logs and telemetry data	LCS environment monitoring
Performance optimize a slow process using X++ and SQL	Trace parser
Simulate concurrent users	PerfSDK/Visual Studio load test

QUESTION 13

A company uses Dynamics 365 Finance. The company is preparing to update to the current version. You need to review information about changes that may break the current version of the product. Where can you find these changes?

A. Lifecycle Services support

B. Removed and deprecated features

C. Release plan

D. Lifecycle Services knowledge base

Correct Answer: C

Dynamics 365, Development and administration for finance and operations apps, Breaking changes

When you make your solution extensible, you also help guarantee that you won\\'t break the extension points later. A breaking change is any change that can break a consumer of your code.

QUESTION 14

DRAG DROP

A company uses Dynamics 365 Supply Chain Management.

You are performing regression testing using the Regression suite automation tool (RSAT). You observe that invoice totals for some sales orders are lower than expected.

You need to ensure that the invoice totals are correct.

What should you do? To answer, drag the appropriate actions to the correct scenarios. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Actions	Scenario	Action
Use a test case operator.	Create a step to check the invoice amount.	
Validate the control gesture.	Ensure invoice totals are correct.	
Add an info step control gesture.		

Correct Answer:

Answer Area

Actions	Scenario	Action
	Create a step to check the invoice amount.	Use a test case operator.
	Ensure invoice totals are correct.	Validate the control gesture.
Add an info step control gesture.		

Box 1: Use a test case operator.
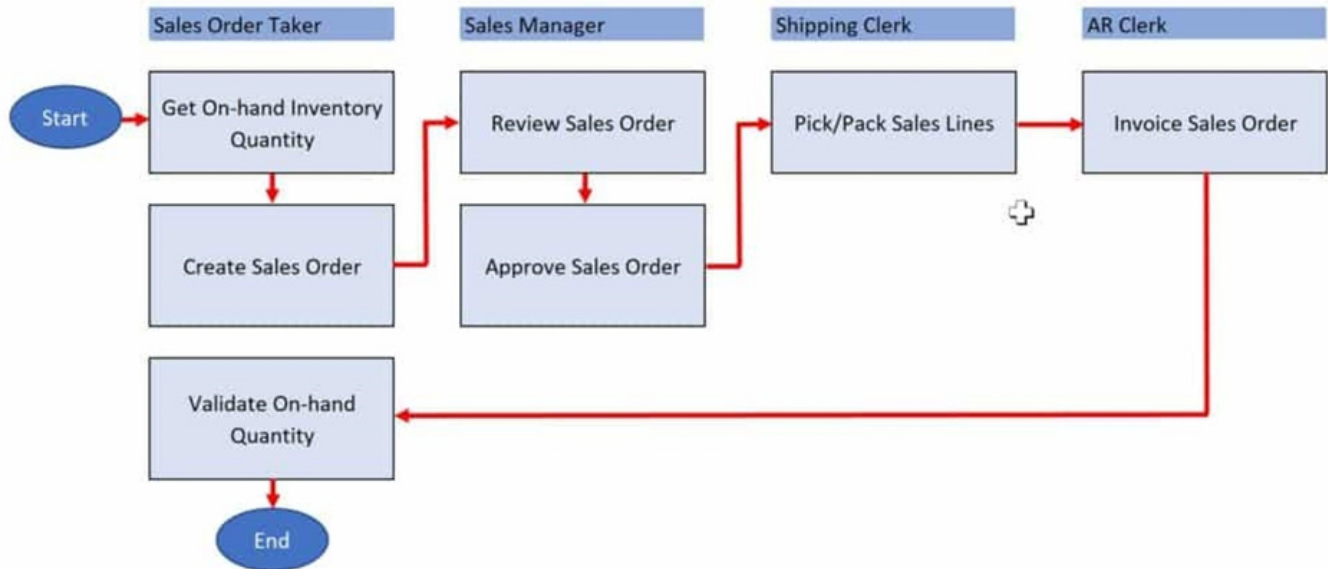

Supported operators are +, -, / and \\'\\'.

Capturing a value in one step and adding it into a value captured in a subsequent step can now provide you with a logical step using comparison operators such as "=", "andlt;" ," >", etc.

Box 2: Validate the control gesture

RSAT allows you to include validation steps within your test case to validate expected values.

Note: Validation steps are also critical when the expected results should be verified as a part of the test case. Where an inventory quantity should be updated and verified from a Sales Order that has been picked, packed and invoiced, it is

useful to have such a validation step in your recording.

Planning test cases by role will allow you to use validations to verify results as well as test your security to prepare for update or testing of a new security role. Incorrect:

* Add an info step control gesture "Gesturing" is the use of special Task Recorder functions, such as Copy and Paste", which, are not viewable in the recording but are understood by RSAT. These functions make note of fields of your choosing and, upon creating the executables and parameter files in RSAT, convert those gestures into variables which can be used to "chain" your test cases together.

QUESTION 15

A company is implementing Dynamics 365 Finance. The company plans to use Business process modeler (BPM) tool to align their business processes with industry-standard processes.

You need to help the company get started using BPM.

Which prerequisite should the company install?

A. Business events catalog

B. Asset library

C. American Productivity and Quality Center (APQC) membership

D. Azure DevOps project

Correct Answer: D

Business process modeler (BPM) in Lifecycle Services (LCS), prerequisites To effectively use BPM, you must have Microsoft Office 2010 and a Microsoft Azure DevOps project. Reference: https://docs.microsoft.com/en-

us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/bpm-overview
